### Terminal Boulevard Resurfacing Project

**Cost:** \$4.9 Million

**Current Status:** Completed November 2016, two months ahead of schedule.

**About the Project:** This project repaired a major thoroughfare to the Port of Virginia's Norfolk International Terminals and Naval Support Activity Hampton Roads. Crews resurfaced 2 miles of Terminal Boulevard between I-564 and Hampton Boulevard in Norfolk, and they completed the project two months ahead of the original contract completion date. Work included rehabilitation of the I-564 off-ramp to westbound Terminal Boulevard, new curbs, gutters and guardrails, and the replacement of damaged stormwater pipes. The project was the first in Hampton Roads to use rubblization, a process in which the previous concrete roadway was broken into aggregate and used as a base for the new asphalt roadway.

# Military Highway Continuous Flow Intersection Design-Build

**Cost:** \$60.6 Million

**Current Status:** Construction began August 2016. Contract completion May 2018.

**About the Project:** The project will increase through-traffic capacity at Military Highway and Northampton Boulevard in Norfolk with a high-capacity intersection design. Left-turning vehicles will be moved away from the main intersection into dedicated turn lanes, eliminating conflicts with opposing traffic. Roadway safety is increased by minimizing stop-and-go conditions and reducing the number of conflict points at the main intersection. The project also includes the widening of Military Highway, Northampton Boulevard and Princess Anne Road.

### I-564 Intermodal Connector

**Cost:** \$175.6 Million

**Current Status:** Construction underway. Construction completion Fall 2018.

**About the Project:** The purpose of this project is to provide a safe, high-speed highway connection from the existing I-564 to Norfolk International Terminals and the Norfolk Naval Station. This road realignment will alleviate congestion and improve the level of service on city and naval station streets.
