

Guidelines for Installing and Registering MSCOMCT2.OCX

MSCOMCT2.OCX is a Microsoft Office 32-bit object library for Windows that is not included with 64-bit versions of Windows and is generally not compatible with 64-bit versions of Office. However, it may be installed in 64-bit versions of Windows for use with 32-bit versions of Office, to enable a number of standard controls. In order for the form functions in the CPM Bar-chart Template to work as designed, the MSCOMCT2.OCX file must be installed and registered on the user's computer.

The following are guidelines for installing and registering the MSCOMCT2.OCX file:

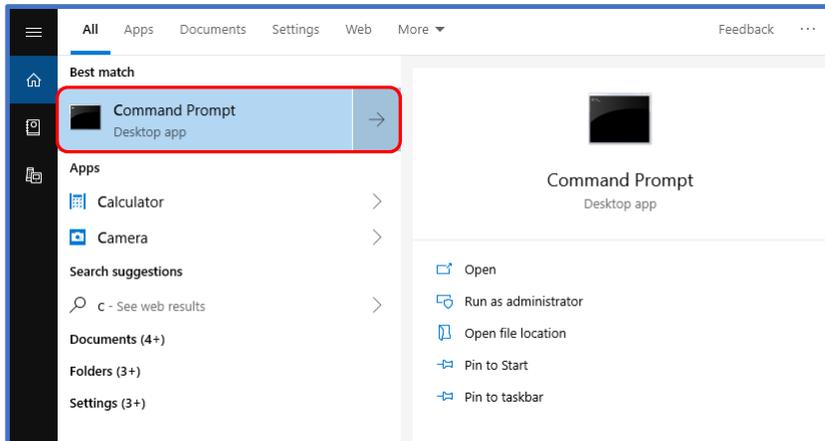

1. Obtain a copy of the Microsoft MSCOMCT2 file using the link below:

<http://www.virginiadot.org/business/resources/const/mscomct2.zip>

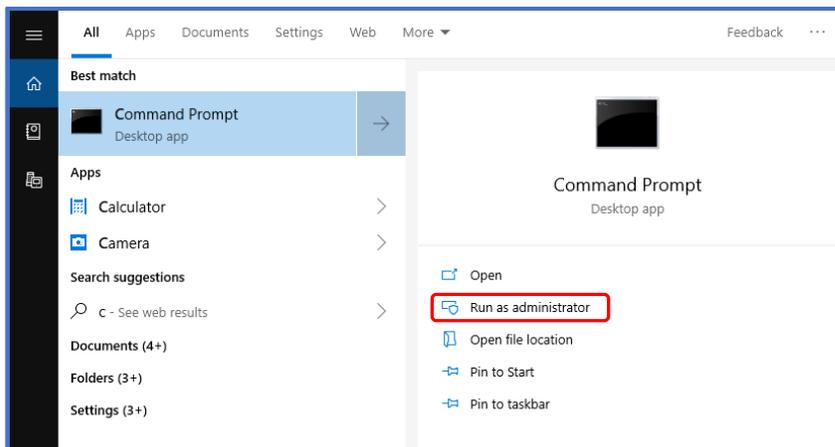

2. Unzip and copy the MSCOMCT2.OCX file into the folder:

C:\Windows\SysWOW64

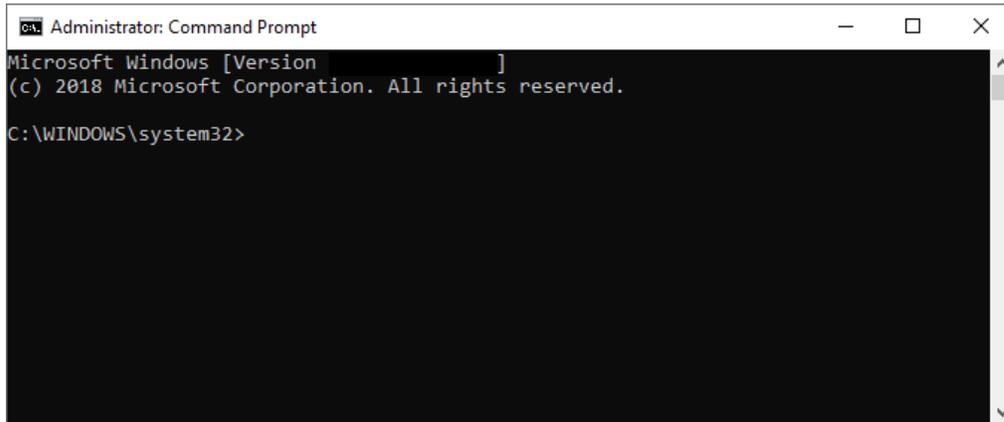

3. Search or locate the *Command Prompt* app.

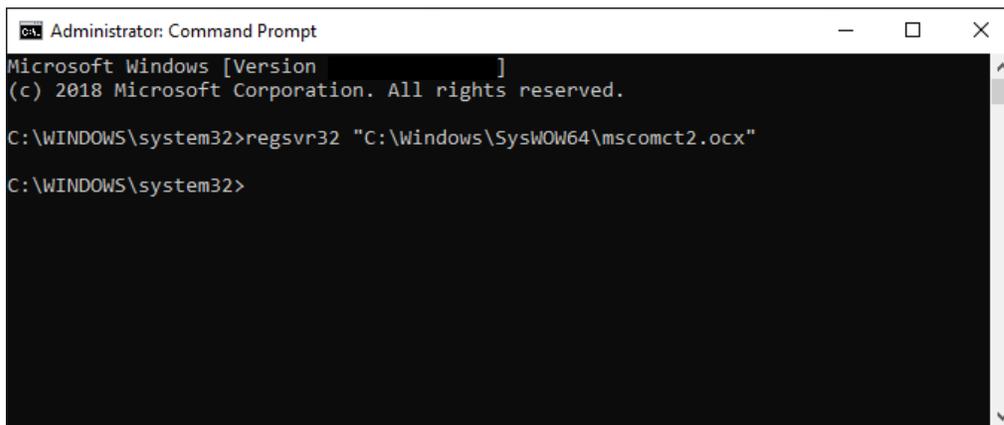

4. Right-click and select *Run as Administrator* (even if you are the administrator of the PC).

- The Window should open to the folder C:\Windows\system32 as shown below.

- If the command line indicates any other folder type:
CD\ C:\Windows\system32 at the flashing cursor and press the Enter key.
- Next type: *regsvr32 "C:\Windows\SysWOW64\mscomct2.ocx"* and press the enter key.

- Click Ok.
