

SUBSURFACE INFORMATION (BORING LOGS)

VDOT PROJECT NO. PM9G-029-F18, N501

Hybla Valley Subdivisions

The subsurface information shown on the boring logs in this informational package was obtained with reasonable care and recorded in good faith solely for use by the Department in establishing design controls for the project. The Department has no reason to suspect that such information is not reasonably accurate as an approximate indication of the subsurface conditions at the sites where the borings were taken. The Department does not in any way warrant or guarantee that such data can be projected as indicative of conditions beyond the limits of the borings shown; and any such projections by bidders are purely interpretative and altogether speculative. Further, the Department does not in any way guarantee, either expressly or by implication, the sufficiency of the information for bid purposes.

The boring logs are made available to bidders in order that they may have access to subsurface data identical to that which is possessed by the Department, and are not intended as a substitute for personal investigation, interpretation and judgement by others. The data in this packet may not represent all of the borings performed on the project, particularly if consultant designers performed work under self contained geotechnical/design contracts.

Please note that the boring location plans contained within this packet may not represent the most current design intent of the project. Additionally, boring logs included in this packet may have been performed for facilities which are no longer included in project design. Please reference the plans provided in the construction advertisement documents for questions concerning facilities proposed for this project.

The boring logs and supporting information contained in this packet have been divided into three sections, as follows:

1. Boring Location Plans
2. Core Location Photographs
3. Boring Logs
